

BODY IMAGE

WHAT IS BODY IMAGE?

Body Image is a person's inner perception of their own body.

WHY BE CONCERNED?

Negative Body Image may result in:

- Poor Self Esteem
- Less Participation in Physical Activities
- Limiting food choices
- Disordered Eating
- Anxiety or Depression

WHAT CAN YOU DO?

- Remind yourself that genetics play an important role in determining a person's weight, size and body type
- Promote exercise and healthy eating as a means to physical, mental and emotional well-being and enjoyment
- Trust your internal hunger and fullness cues
- Understand how the media portrays unrealistic physical appearances

DID YOU KNOW?

- *By age 4, children want to be thin.
- **38% of boys and 50% of girls used unhealthy weight control behaviours.

This information was compiled by:
* Elementary Teachers Federation of Ontario (www.etfo.ca)

Positive Body Image Is...

- + A clear, true perception of your shape—you see the various parts of your body as the really are.
- + You celebrate and appreciate your natural body shape and you understand that a person's physical appearance says little about their character and value as a positive person.
- + You feel proud and accepting of your unique body and refuse to spend an unreasonable amount of time worrying about food, weight, and calories.

Negative Body Image Is...

- A distorted perception of your shape—you perceive parts of your body unlike they really are.
- You are convinced that only other people are attractive and that your body size or shape is a sign of personal failure.
- You feel ashamed, self-conscious, and anxious about your body.
- You feel uncomfortable and awkward in your body.

People with negative body image have a greater likelihood of developing an eating disorder and are more likely to suffer from feelings of depression, isolation, low self esteem, and obsessions with weight loss.
